EXPERIENCE

OurFreedom.ai — New York City, USA

Jan 2026 – Jun 2026

Full-Stack Software Engineer (Mobile + Backend)

- Maintainer and reviewer on both halves of the platform: a NestJS + MongoDB backend of roughly 40 modules with about 20 contributors, and the React Native + Expo iOS/Android app. 110+ commits since January, merging the release line for the team.
- Designed and shipped a two-track release pipeline combining Expo OTA on iOS and Android, Google Play in-app updates, App Store deep links, and a backend force-update protocol (GET /api/app-version), orchestrated through useAppUpdate and useNativeVersionCheck hooks; runtime-fingerprinted OTAs and channel-pinned publish scripts keep local .env values out of production bundles.
- Built end-to-end sensitive-image moderation: a NestJS module backed by AWS Rekognition and an S3 staging lifecycle, plus a custom iOS Swift native module wrapping Apple's on-device SCSensitivityAnalyzer. The hybrid device-first / backend-fallback policy with SHA-256 content-hash caching runs live across posts, profiles, uploads, and physical mail.
- Shipped the Direct Messaging subsystem: extended dm/conversations with a ConversationReport entity, four endpoints, per-user unread aggregation, and a mark-as-read API; rebuilt the client around dynamic 1:1 and group DMs, adaptive polling, blocking, reporting, global search, typing indicators, and unified post sharing.
- Owned iOS release hardening and the trust layer: age-verification gating with US-state resolution and declared-age-range entitlement, Apple Sign-In hardening, TestFlight bundle and URL-scheme alignment, a hardened expo.extra env allowlist, Stripe key bootstrap, AdMob with SKAdNetwork and ATT, and operator runbooks for every release path — clearing App Store review with no release rejections.
- Led technical operations for the team across code review, PR management, deployment coordination, and CI/CD on GitHub Actions and Vercel, delivering features from requirements to production in three-week sprints with zero-downtime deployments.
- Rewrote the username and handle system across social/profiles and social/follows (schemas, DTOs, controllers, services), with matching report-profile, block, search, and handle UI on mobile.

ACN Fiber Pvt Ltd — Mumbai, India

Jun 2023 – Jul 2024

Software Developer

- Built and deployed Express.js REST APIs integrating third-party telecom services, scaling to 10,000+ daily users and powering real-time customer data flows across multiple software modules.
- Standardized request/response contracts and error-handling patterns across endpoints, improving maintainability and cutting on-call debugging time for the team.

PROJECTS

Lumina — AI Compliance Q&A Assistant

Sep 2025 – Dec 2025

Next.js · React · TypeScript · FastAPI · LangChain · FAISS · OpenAI GPT-4o-mini

- Built an end-to-end retrieval-augmented compliance Q&A pipeline: PDF upload, chunking, embeddings, FAISS vector search, top-k retrieval, prompt assembly, and source-cited answers in the UI.
- Hardened retrieval with cosine-similarity normalization, fuzzy matching for non-exact queries, and a migration off deprecated LangChain chains onto a modern runnable sequence; added context caps and fallbacks to eliminate empty or repetitive responses.

Fund Flow — Full-Stack Personal Finance App

Aug 2024 – Dec 2024

React · Next.js · Redux · Node/Express · MongoDB · Gemini 1.5 · ECharts · i18next

- Shipped a full-stack expense, budget, and shopping-list manager with end-to-end CRUD over RESTful APIs, organized around Domain-Driven Design and an interactive ECharts dashboard.
- Integrated a Gemini-1.5-Flash assistant for financial insights, real-time collaboration via Fugu, automated alerts via EmailJS, and multilingual support via i18next.

EDUCATION

Northeastern University — Boston, MA

Sep 2024 – Dec 2026

M.S. in Information Systems | Coursework: Web Development, Prompt Engineering, Program Structures & Algorithms, System Design, Software Quality Control & Management, Database Management, UI/UX

University of Mumbai — Mumbai, India

Jun 2020 – Jul 2023

B.Tech in Electronics and Telecommunication Engineering

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Swift, Java, C++

Mobile / Frontend: React Native, Expo, EAS, iOS Swift native modules, Android in-app updates, expo-updates / OTA, React, Next.js, Redux, Tailwind CSS

Backend / Data: NestJS, Node.js, Express, FastAPI, REST APIs, JWT, WebSockets, MongoDB, MySQL, Firebase, Redis, FAISS

Cloud / AI / Platforms: AWS (S3, Rekognition), Docker, Stripe, Twilio/Telnyx, Lob, GitHub Actions, Vercel, OpenAI/Gemini/Anthropic API integrations, LangChain, RAG, prompt engineering, fine-tuning LLMs, Xcode, Android Studio, Cursor, VS Code
